

Health Habit Hub — Participant Guide

This guide will help you use the Health Habit Hub app confidently. It covers everything from installing the app on your device to understanding your personalised habit recommendations.

Table of Contents

1. Accessing the App
 2. Logging in with Your Token Card
 3. Completing Your Profile
 4. Donating a Habit
 5. Exploring the Habit Graph and Annotating Nodes
 6. Understanding Your Recommendations
 7. Updating Your Profile
-

1. Accessing the App

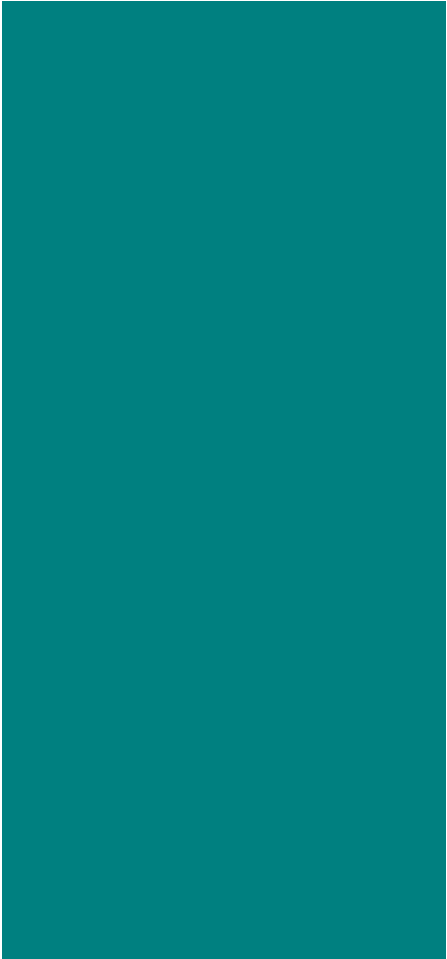

You can use Health Habit Hub on Android, iOS, or directly in your browser — no account registration required.

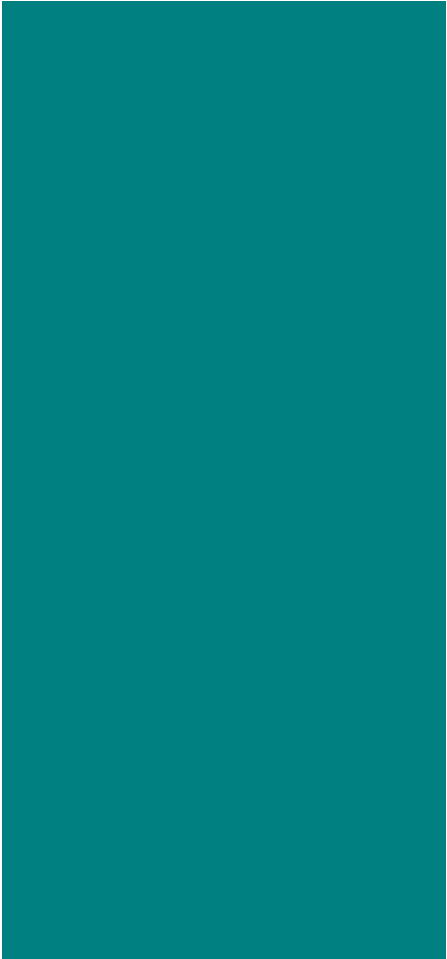

Android (APK install)

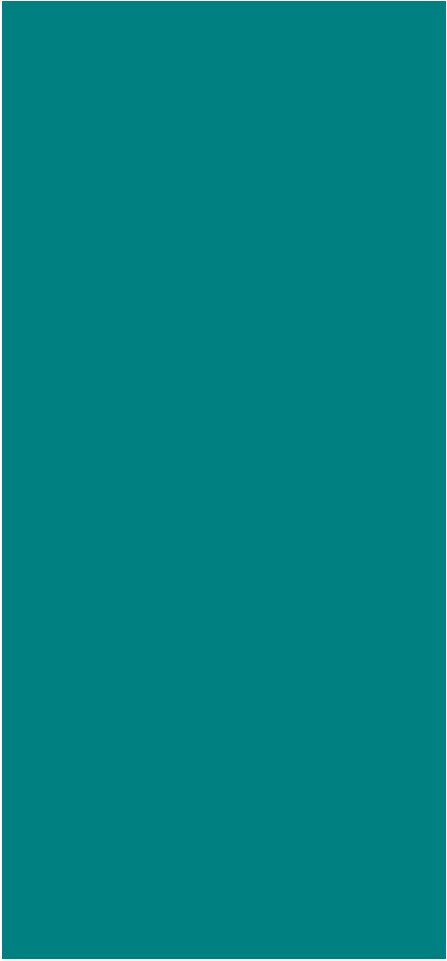

Step 1. Download the latest APK file from the link provided by the study team (e.g. in your invitation email).

Step 2. On your Android phone, open **Settings** → **Security** and enable **Install from unknown sources** (or **Allow from this source** for your browser).

Step 3. Open the downloaded APK file and tap **Install**. Tap **Open** when installation completes.

iOS

Step 1. Use the link provided by the study team in Safari on your iPhone or iPad.

Step 2. Follow the on-screen instructions to install the app via TestFlight or open the browser version.

Browser (Chrome / Firefox)

Step 1. Open Chrome or Firefox and navigate to the URL provided by your study coordinator (e.g. <https://hhh.tu-dresden.de>).

Step 2. You can optionally **Add to Home Screen** for quick access — tap the share icon in Safari/Chrome and choose **Add to Home Screen**.

2. Logging in with Your Token Card

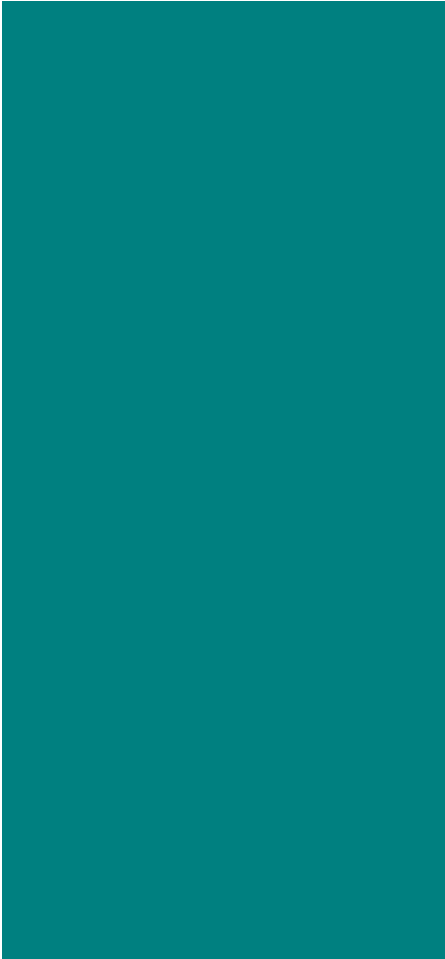

The study team will give you a **token card** — a small card with a QR code and a printed username and password. You do not need to choose or remember a password.

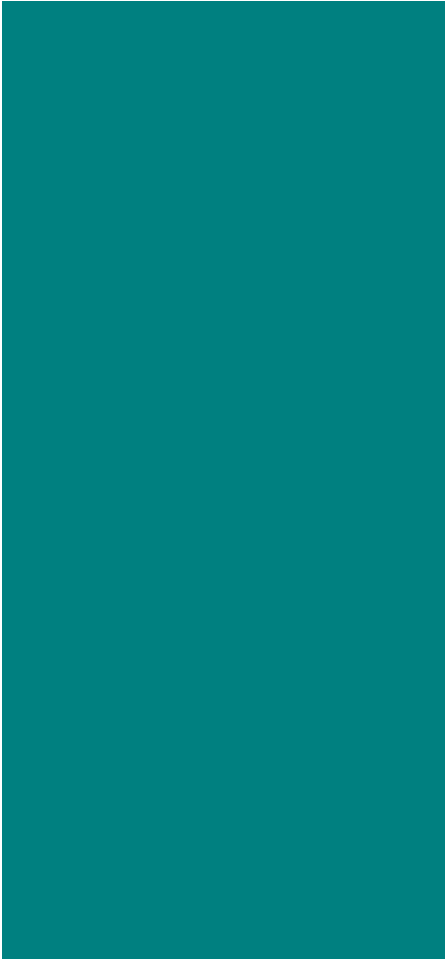

Step 1. Open the app. You will see the **Health Habit Hub** login screen with a teal shield icon, a **Username** field, and a **Password** field.

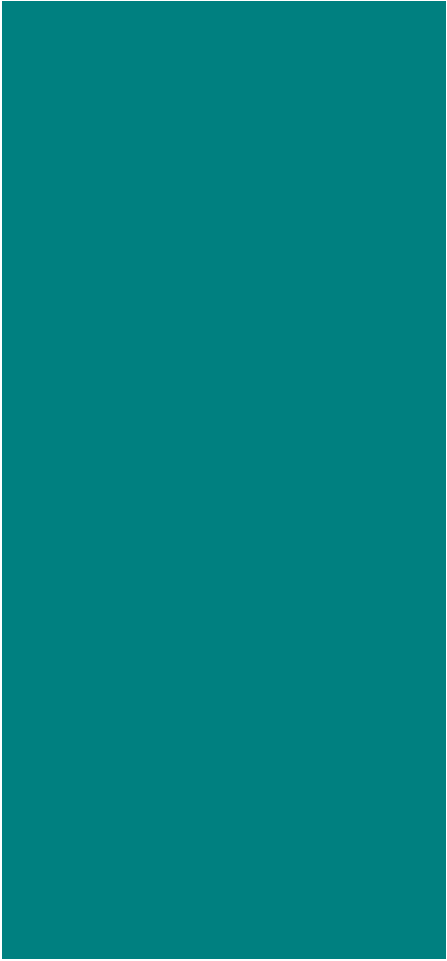

Step 2 (QR scan — Android/iOS only). Tap the QR scan button if shown, then point your camera at the QR code on your token card. The username and password fields will fill in automatically.

Step 3 (manual entry). If QR scanning is not available or you are using a browser, type the username and password exactly as printed on your token card. Usernames look like **hhh-1234**.

Step 4. Tap **Login**. A loading spinner will appear briefly while the app connects to the server. You will then be taken to the main screen.

Tip: Keep your token card safe. If you lose it, contact your study coordinator to get a replacement.

Troubleshooting: If you see “Invalid credentials”, check that you typed the username and password exactly as shown on the card (they are case-sensitive). Make sure you have a working internet connection.

3. Completing Your Profile

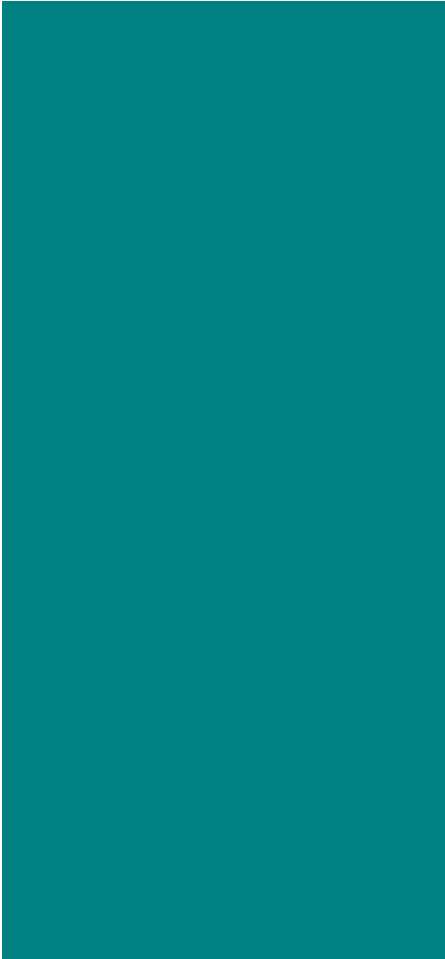

Before you can donate habits or receive recommendations, you need to complete a short profile questionnaire. This helps us personalise your experience.

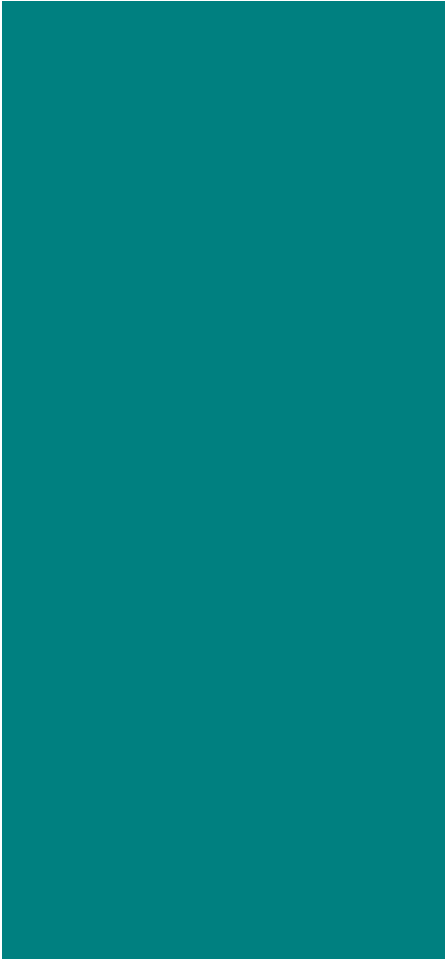

Step 1. After logging in, tap the **Profile** tab at the bottom of the screen (it looks like a person icon).

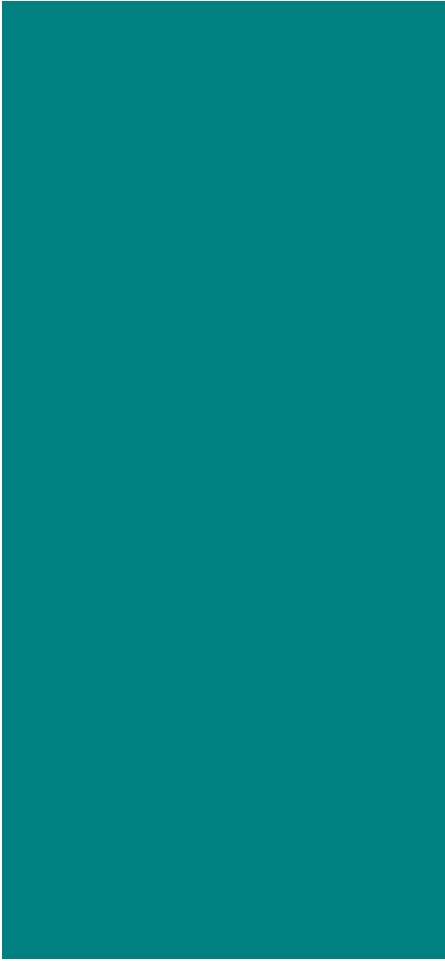

Step 2. The profile questionnaire will load inside the app. It asks a few short questions about your background — for example, your age group and how often you exercise. All answers are anonymous.

Step 3. Answer each question and tap **Next** to move to the following page.

Step 4. When you reach the last page, tap **Submit**. You will see a green tick and the message **Profile Completed** with today's date.

What if I cannot connect? If the app shows an orange **No connection** banner, check your Wi-Fi or mobile data and tap **Retry**.

4. Donating a Habit

Donating a habit means sharing one of your everyday routines with the research project. For example: “*I brush my teeth after I wake up every morning*”. All donations are anonymous.

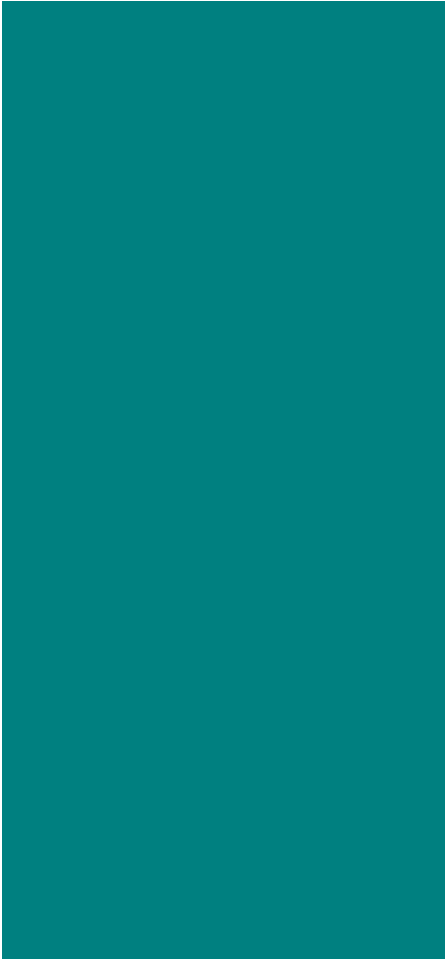

Step 1. Tap the **Donate** tab at the bottom of the screen (it looks like a gift icon).

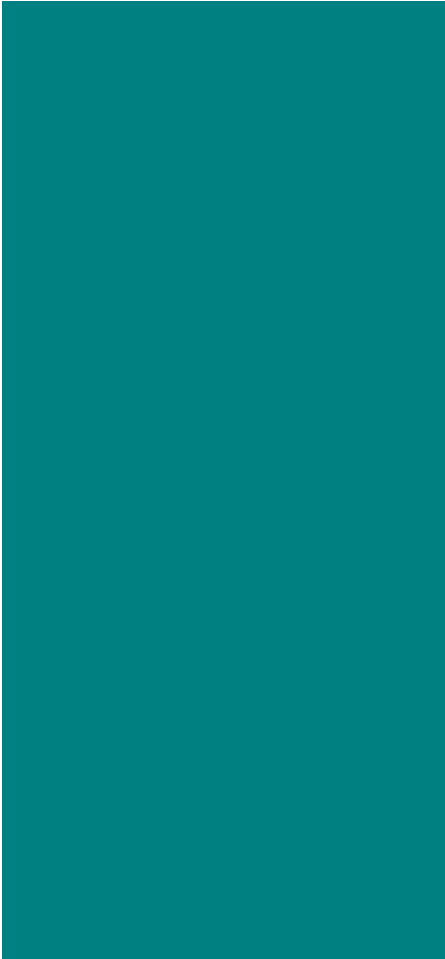

Step 2. The habit-donation survey will load. Depending on which study group you are in, you may see detailed instructions or just a simple text box — this is intentional.

Step 3. Describe your habit in the text box. Be as specific as you can: include what you do, when you do it, and where.

Step 4. If prompted, use the buttons below the text box to mark words as **behaviour** (the action you perform) or **context** (when or where it happens). Tap a word or phrase in your text to select it, then tap the appropriate button.

Step 5. Tap **Submit** at the bottom. A confirmation message — **Habit donated successfully!** — will appear briefly.

You can donate more than one habit. Just tap the **Donate** tab again after each submission to start a new one.

5. Exploring the Habit Graph and Annotating Nodes

The **Explore** tab shows you an interactive graph of all the habits donated by participants. You can browse and annotate the nodes to help researchers classify habits.

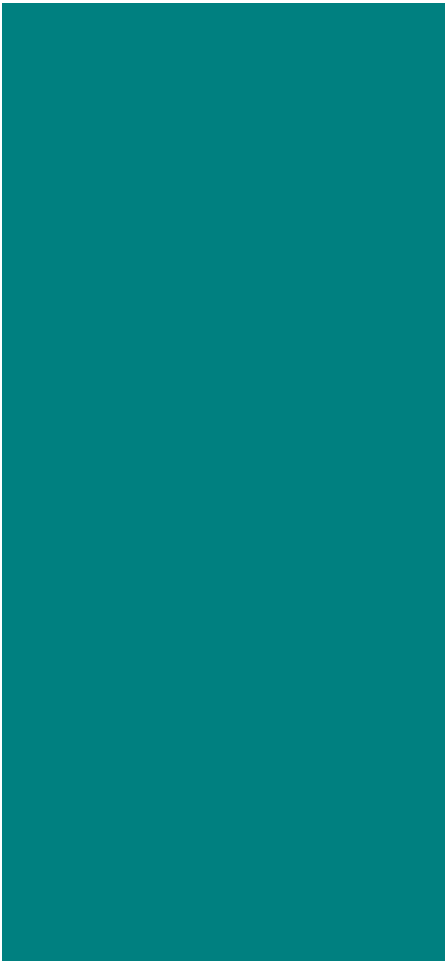

Step 1. Tap the **Explore** tab at the bottom of the screen.

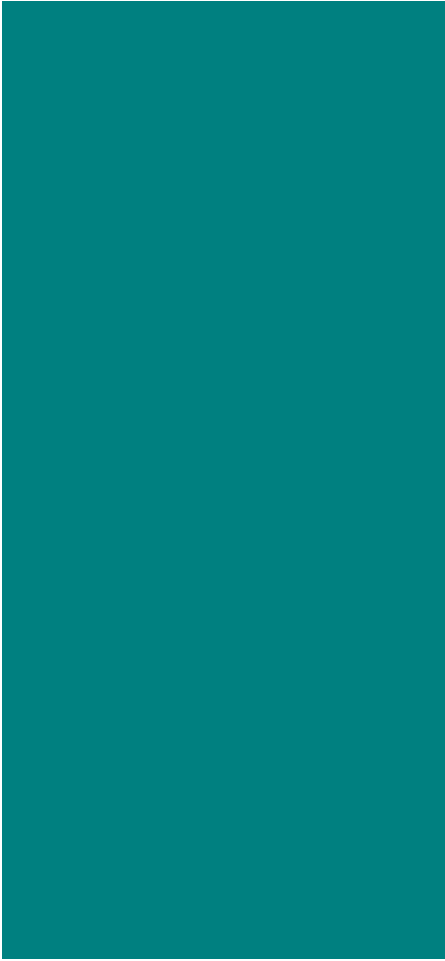

Step 2. The habit graph will load. You will see habit nodes grouped by category. Use the **category filter** at the top to narrow down the habits shown.

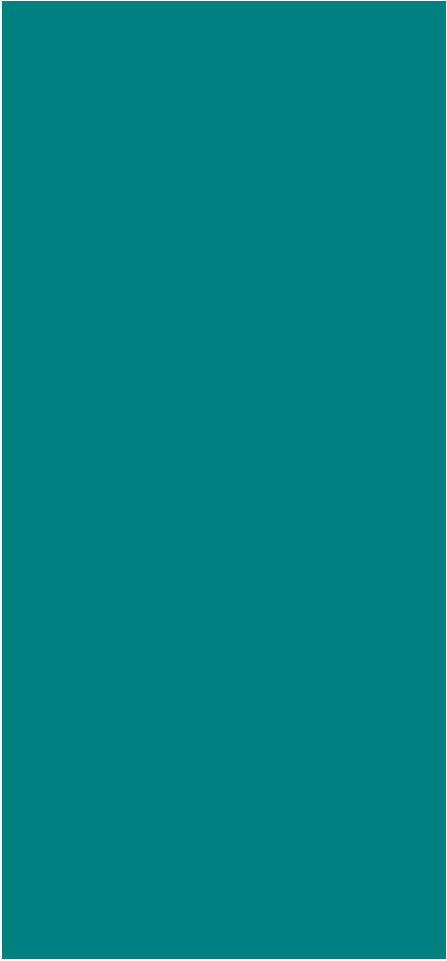

Step 3. Tap any habit node to open a detail view. You can read the habit description and see how other participants have annotated it.

Step 4 (annotating). In the detail view, tap the annotation buttons — for example **Behaviour** or **Context** — to classify part of the habit text. Your annotation is saved automatically.

Step 5. Scroll through the graph to discover more habits. You can zoom in and out by pinching on touch screens.

Tip: Annotations are anonymous and help train the recommendation system. Even a few annotations per session are valuable.

6. Understanding Your Recommendations

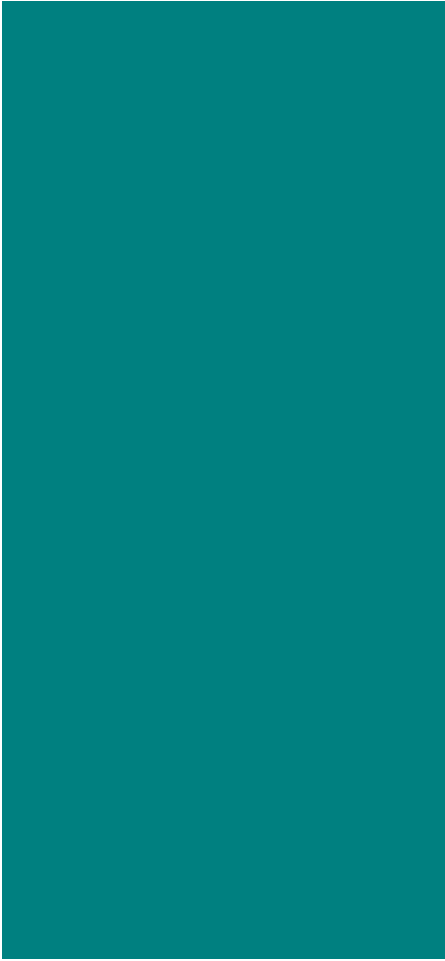

After you complete your profile and donate at least one habit, the **Recommend** tab shows personalised habit suggestions based on your profile and donated habits.

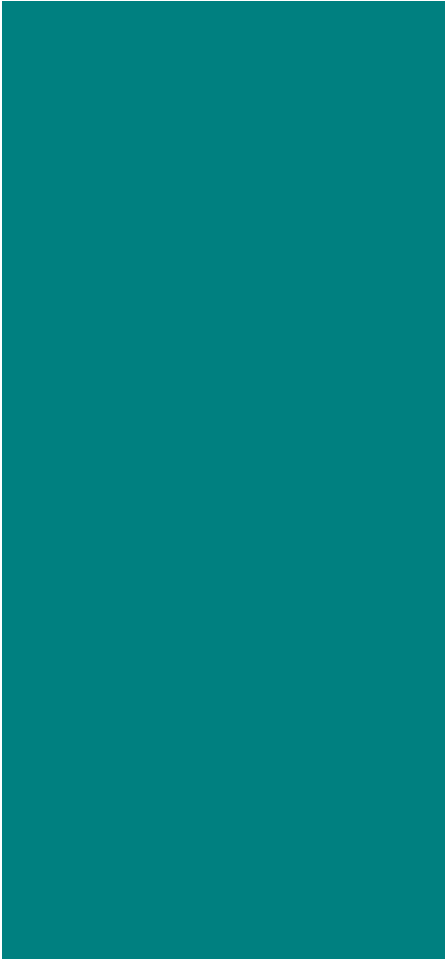

Step 1. Tap the **Recommend** tab at the bottom of the screen.

Step 2. A list of recommendation cards will appear. Each card shows: - **Habit name** — a short description of the suggested habit. - **Category** — the behaviour category (e.g. Exercise, Sleep, Nutrition). - **Rationale** — why this habit was recommended for you, explained in plain language. - **Citation** — the research reference that supports this recommendation.

Step 3. For each recommendation you can: - Tap **Accept** to add it to your personal habit list. - Tap **Dismiss** to remove it from your list.

New recommendations appear automatically when the system finds new matches — you will see a live indicator dot in the top-right corner of the screen (green = live, grey = polling every few minutes).

Figures 6a–6c: The recommendations screen on Android, iOS, and Chrome.

No recommendations yet? If you see the message “*No recommendations yet — complete your profile first*”, go to the **Profile** tab and finish the questionnaire. Recommendations can take a few minutes to appear after profile completion.

7. Updating Your Profile

You can update your profile at any time if your circumstances change.

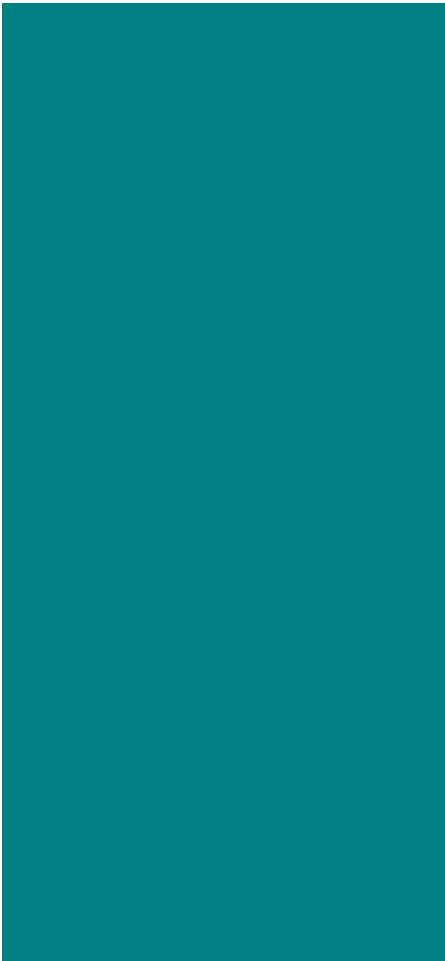

Step 1. Tap the **Profile** tab at the bottom of the screen.

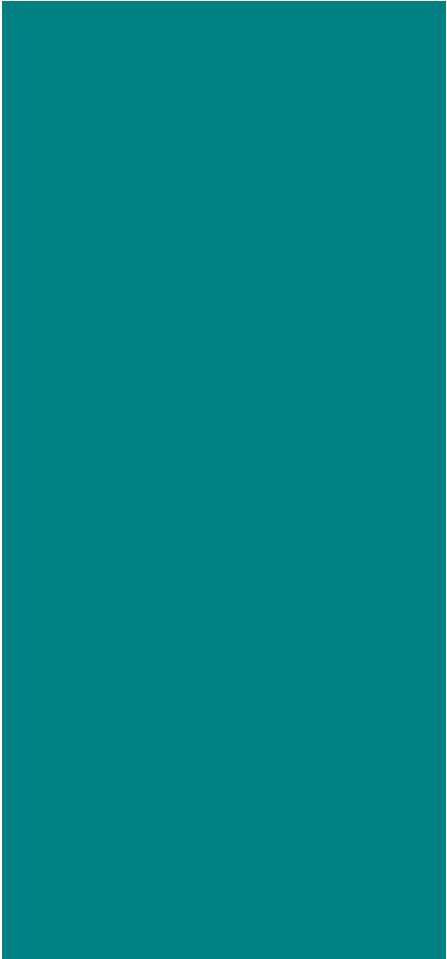

Step 2. If you have already completed your profile, you will see a **Profile Completed** card with a green tick and the date you filled it in.

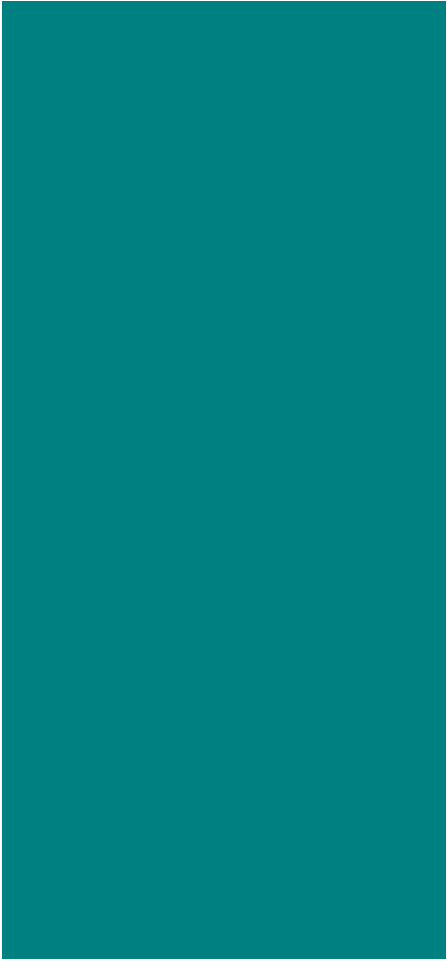

Step 3. Tap the **Edit** button on the card.

Step 4. The profile questionnaire will open again with your previous answers pre-filled. Update any answers that have changed.

Step 5. Tap **Submit** when you are done. Your profile will be saved and the card will show the new completion date.

Figures 7a–7c: The profile summary card with Edit button on Android, iOS, and Chrome.

Updating your profile will refresh your recommendations. The system uses your latest answers to generate new personalised suggestions.

Need Help?

If you have any questions or problems with the app, please contact your study coordinator using the details on your token card or in your invitation email.

Thank you for contributing to the Health Habit Hub research project!
