

Health Habit Hub — Admin Guide

This guide walks researchers and administrators through every day-to-day task in the Health Habit Hub platform. No developer assistance is needed for the operations described here.

Quick Start: Setting Up a New Study Cohort

Use this checklist when launching a new cohort of participants.

1. **Log in as admin** — open <https://hhh.tu-dresden.de/admin> and authenticate with your admin credentials (Section 1).
 2. **Create participant accounts** — for each participant, use *Participants* → *New Participant* and note the generated token (Section 2).
 3. **Download and distribute token cards** — download the printable PDF token card for each participant and hand it out physically or via post (Section 2).
 4. **Assign study groups** — assign each participant to one of the four study groups (G1–G4) in the participant’s detail view (Section 3).
 5. **Create or publish questionnaires** — set up the baseline profile survey and any follow-up questionnaires; assign them to the correct groups (Section 4).
 6. **Verify first logins** — open the participant progress dashboard and confirm each participant’s first login is registered (Section 6).
 7. **Monitor habit donations** — once the study is running, use the habits dashboard to check donation counts per group (Section 5).
 8. **Export data for analysis** — use the CSV export button to download donated habits for offline analysis (Section 5).

Table of Contents

1. Logging In as Admin
 2. Creating a Participant and Downloading the Token Card
 3. Assigning Study Groups
 4. Configuring Questionnaires
 5. Monitoring Donated Habits
 6. Tracking Participant Progress
 7. Revoking Device Sessions
 8. Configuring Token Card Format in Settings
-

1. Logging In as Admin

The admin panel is accessible only to users with the **admin** or **researcher** Keycloak role. Participants cannot access any admin screen even if they navigate to the URL.

Step 1. Open a browser and navigate to **https://hhh.tu-dresden.de** (or **http://localhost:3000** in development).

Step 2. On the login screen enter your **admin username** and **password** (not a token card — admin accounts use a regular password set in Keycloak). Tap **Login**.

Step 3. After login, the navigation bar will show an extra **Admin** tab (gear icon). Tap it to open the admin panel.

Screenshot	Callout annotations
	(1) Username field — enter your admin account username. (2) Password field — enter your admin password (not a token card code). (3) Login button — tap to authenticate. (4) HHH logo and version number shown at the top of the login card.

Figure 1: Admin login screen. Callout numbers correspond to the table above.

Tip: If you see “Invalid credentials”, check that you are using an admin account (not a participant token). Participant tokens are one-time tokens and cannot be used to log in as admin.

2. Creating a Participant and Downloading the Token Card

Each study participant needs an account and a printable token card with their QR-code credentials.

Step 1. In the Admin panel, tap **Participants** in the left sidebar.

Step 2. Tap the **+ New Participant** button in the top right.

Step 3. Fill in the **Display Name** (optional, for your reference only — participants are pseudonymised) and select the **Study Group** (you can change this later; see Section 3).

Step 4. Tap **Create**. The system generates a pseudonymous username (e.g. p-2024-0042) and a one-time access token.

Screenshot	Callout annotations
	(1) Display Name field — researcher-visible only; not shown to the participant. (2) Study Group dropdown — defaults to G1; can be changed later. (3) Create button — generates credentials and creates the Keycloak account.

Figure 2a: New participant creation form.

Step 5. After creation, the participant’s detail view opens automatically. Tap **Download Token Card** to get a printable PDF.

Step 6. Print the token card and hand it to the participant. The card contains: - The study logo and participant pseudonym - A QR code that encodes `hhh://login?user=<username>&token=<password>` - The username and password in plain text (for manual entry)

Screenshot	Callout annotations
	(1) Participant pseudonym and internal ID. (2) Download Token Card button — generates the printable PDF. (3) Copy Credentials button — copies username:password to clipboard for digital distribution. (4) QR code preview showing the encoded deep link.

Figure 2b: Participant detail view after creation, showing the token card download button.

Tip: The token card PDF is re-downloadable at any time from the participant’s detail view. Tokens do not expire unless you manually revoke them.

3. Assigning Study Groups

Each participant must be assigned to exactly one study group (G1–G4). The group determines which questionnaire items are shown and how habits are classified.

Group	Description
G1	Full intervention — structured habit donation
G2	Partial intervention — structured donation without recommendations
G3	Full intervention + free-text annotation
G4	Minimal intervention + free-text annotation

Step 1. In the Admin panel, tap **Participants** and open the participant you want to assign.

Step 2. Tap the **Study Group** dropdown (currently shows the group assigned at creation).

Step 3. Select the new group and tap **Save**.

Screenshot	Callout annotations
	(1) Participant pseudonym and current group badge. (2) Study Group dropdown — select G1, G2, G3, or G4. (3) Save button — immediately updates the group in Keycloak and Neo4j. (4) Group change history log showing previous assignments with timestamps.

Figure 3: Assigning a study group to a participant.

Warning: Changing a participant’s group mid-study may affect recommendation quality and data integrity. Only change the group before the participant logs in for the first time, unless instructed by the study lead.

4. Configuring Questionnaires

Questionnaires (surveys) are JSON-schema driven forms shown to participants on the Donate and Profile screens. Admins can create, edit, publish, archive, and assign questionnaires to specific study groups.

Creating a Questionnaire

Step 1. In the Admin panel, tap **Questionnaires** in the sidebar, then tap **+ New Questionnaire**.

Step 2. Enter a **Title** and select a **Type**: **profile** (shown on the Profile screen) or **habit** (shown after habit donation).

Step 3. Paste or type the **JSON Schema** that defines the form fields. The schema must follow the JSON Schema draft-07 format. Each property becomes one form field.

Step 4. Tap **Save as Draft**. The questionnaire is not yet visible to participants.

Screenshot	Callout annotations
	(1) List of all questionnaires with status badges (Draft / Published / Archived). (2) + New Questionnaire button. (3) Filter bar to search by title or type. (4) Row action buttons: Edit, Publish/Archive, Assign Groups, Delete.

Figure 4a: Questionnaire list view.

Screenshot	Callout annotations
	(1) Title field. (2) Type selector (profile / habit). (3) JSON Schema editor with syntax highlighting. (4) Preview button — renders the form as participants will see it. (5) Save as Draft button.

Figure 4b: New questionnaire creation form.

Publishing and Archiving

- **Publish:** Tap the **Publish** action on a Draft questionnaire. Published questionnaires are immediately visible to all assigned groups.
- **Archive:** Tap **Archive** on a Published questionnaire to hide it from participants. Existing responses are retained.

Assigning Questionnaires to Groups

Step 1. On the questionnaire list, tap **Assign Groups** for the questionnaire.

Step 2. Toggle on the study groups (G1–G4) that should see this questionnaire.

Step 3. Tap **Save Assignment**.

Screenshot	Callout annotations
	(1) Questionnaire name shown at the top. (2) Group toggle checkboxes (G1–G4). (3) Currently assigned groups highlighted in teal. (4) Save Assignment button.

Figure 4c: Assigning a questionnaire to specific study groups.

5. Monitoring Donated Habits

The Habits dashboard shows all habits donated across all participants, with filter and export capabilities.

Step 1. In the Admin panel, tap **Habits** in the sidebar.

Step 2. The list shows all habit donations sorted by submission date (newest first). Each row shows: pseudonym, habit text, study group, BCIO category, and submission timestamp.

Screenshot	Callout annotations
	(1) Total donation count. (2) List of habit donations with group and BCIO category columns. (3) Sort controls (by date, group, or category). (4) Filter bar (see below). (5) CSV Export button.

Figure 5a: Habits monitoring list.

Filtering Habits

Step 1. Use the filter bar above the list to narrow results: - **Group filter:** Select G1, G2, G3, G4, or All. - **BCIO category filter:** Select a BCT taxonomy category or All. - **Date range:** Set a start and end date to filter by donation date.

Step 2. The list updates in real time as you change filters.

Screenshot	Callout annotations
	(1) Group filter dropdown. (2) BCIO category dropdown. (3) Start date picker. (4) End date picker. (5) Reset Filters button.

Figure 5b: Filter controls on the habits dashboard.

Exporting to CSV

Step 1. Apply any filters you want (or leave all at “All” to export everything).

Step 2. Tap **Export CSV**. The browser downloads `habits_export_<date>.csv`.

The CSV contains columns: `participant_pseudonym`, `study_group`, `habit_text`, `bcio_category`, `submitted_at`, `annotation_text` (G3/G4 only).

Screenshot	Callout annotations
	(1) Export CSV button. (2) Row count shown before export (confirms scope). (3) Download progress indicator.

Figure 5c: Triggering a CSV export.

6. Tracking Participant Progress

The participant progress view shows activity summaries for each participant to help identify inactive or struggling participants.

Step 1. In the Admin panel, tap **Participants** and open a participant’s detail view.

Step 2. Scroll to the **Activity** section. It shows: - **First login date** (or “Not yet logged in”) - **Profile survey completed** (Yes / No) - **Habits donated count** (total and per week) - **Last active date** - **Recommendations accepted / dismissed count**

Screenshot	Callout annotations
	(1) First login date (or “Not yet logged in” banner). (2) Profile completion badge — green tick if completed. (3) Habits donated — number badge with weekly sparkline. (4) Recommendations panel — accepted vs dismissed ratio bar. (5) Last active timestamp.

Figure 6: Participant activity summary.

Tip: Use the **Participants** list view’s “**No logins yet**” filter (Group filter → Status: Never logged in) to identify participants who have not activated their token cards.

7. Revoking Device Sessions

If a participant loses their token card or a device is compromised, you can revoke their active sessions. This forces a re-authentication with a new token.

Step 1. Open the participant’s detail view (Admin panel → Participants → select participant).

Step 2. Tap **Revoke All Sessions**. A confirmation dialog appears: “*This will log the participant out of all devices immediately. Continue?*”

Step 3. Tap **Confirm**. The participant’s Keycloak sessions are terminated. They will see an “Invalid session” message on their next app action.

Step 4. If the participant needs a new token card (e.g. lost card), tap **Regenerate Token** to issue a new random password, then download the updated token card (Section 2).

Screenshot	Callout annotations
	(1) Active Sessions count — shows how many devices are currently authenticated. (2) Revoke All Sessions button (red, destructive action). (3) Confirmation dialog with participant pseudonym. (4) Regenerate Token button — issues a new password without revoking existing sessions.

Figure 7: Revoking a participant’s active device sessions.

Warning: Revoking sessions is immediate and irreversible. The participant will need their new token card to log in again.

8. Configuring Token Card Format in Settings

The token card PDF layout — logo, font size, QR code position, and colour scheme — can be adjusted in the admin settings without code changes.

Step 1. In the Admin panel, tap **Settings** (gear icon in the sidebar footer).

Step 2. Under **Token Card Format**, you can configure:

Setting	Description	Default
Logo URL	URL or base64 of the logo image shown at the top	HHH shield logo
Primary colour	Hex colour for header and QR code border	#1A73E8
Font size	Body text size in pt	11
QR code size	QR block pixel size (80–200)	120

Setting	Description	Default
Footer text	Custom text at card bottom (e.g. study contact)	"Contact: study@tu-dresden.de"
Include plain text credentials	Show username/password below QR code	true

Step 3. Tap **Preview Token Card** to see a live preview PDF with the current settings applied to a sample participant.

Step 4. Tap **Save Settings** to persist. All subsequently downloaded token cards use the new format.

Screenshot	Callout annotations
	(1) Logo URL input with inline image preview. (2) Primary colour swatch picker. (3) QR code size slider. (4) Footer text input. (5) Include plain text credentials toggle. (6) Preview Token Card button — opens PDF preview in a new tab. (7) Save Settings button.
